Content - as of November 2019

Import	1
File > Open	1
Drag & drop using the mouse	1
Content from templates	2

This guide provides basic information on inserting content into Merlin Project Express documents.

A project needs content. In Merlin Project Express this content can be [inserted manually](#), copied from a template, the library or imported from different documents.

The **Library** is a feature existing only in Merlin Project, not in Merlin Project Express.

Import

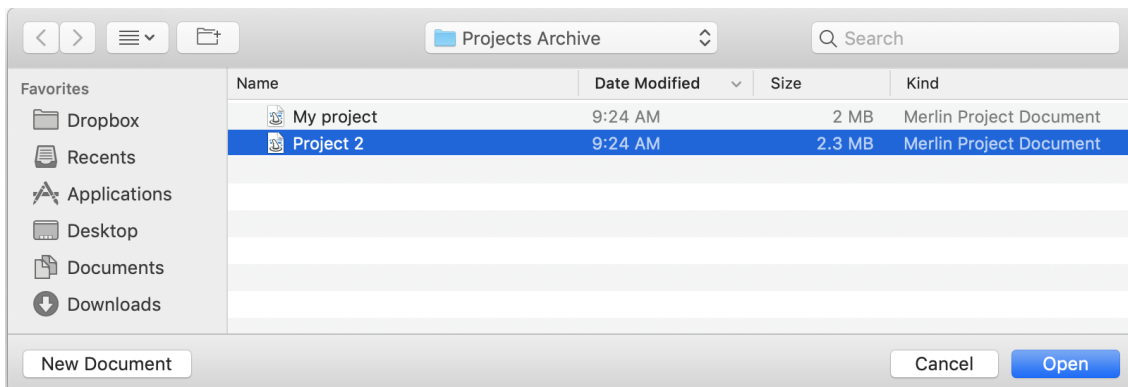

Merlin Project Express imports many types of document format, including **Microsoft Project**, **CSV (Excel)**, **OPML**, **XML**, and **Mind Maps**.

There are various ways to import new content:

- [File > Open](#)
- [Drag & drop using the mouse](#)

File > Open

Call the **File** → **Open...** menu item. It opens existing documents. If the format of the selected document is supported, Merlin Project Express imports the content and opens it in a new document.

Drag & drop using the mouse

You can drag & drop a document directly onto the Merlin Project Express application icon or onto an existing project. Latter, imports the document into the existing project.

Content from templates

Project templates make working with recurring content easier. They are perfect for starting new projects quickly.

A large number of templates can be found in the **File** → **New...** (1) menu item.

You can save existing projects for later use as templates. To create a template of your own from a project, call the **File** → **Save As Template...** (2) menu item.
