Finance

Merlin Project offers you finance options for your project. Every activity, milestone, activity group or assignment can be assigned a budget and base costs.

The easiest way to do this is to use the Finance tab in the Inspector.

There you will find three more tabs:

- Budget
- Cost
- Balance
Budget

**Budget** means *money that is available* for the project.

Select an **activity**, **milestone**, or **assignment** and then click the Finance → **Budget** tab in the inspector. Here you can enter all budget information in the fields provided.

If you do not have a budget and would like to record base **costs** in your project, use the tab **Finance → Cost**.
Cost

In the tab **Finance > Cost** you can enter base costs for the selection.

**Base Costs** are **fixed costs** that arise during **planning** and **execution** of the project and add up to existing **work costs** or **attachment cost**.

If you have several **cost items**, first click the triangle next to Base Costs and create new entries one after the other by clicking the **+** icon. Merlin Project will then add up the individual cost items automatically. The **Base Costs** field lists the **total** of all cost items.

You can select one of the possible accruals:

- Accrue immediately
- Accrue at start
- Accrue prorated
- Accrue at end

**Accrue immediately**

Basic costs with **Accrue immediately** appear immediately and in total in the Actual Base Costs.
Accrue at start

Basic costs with **Accrue at start** appear in total in the Actual Base Costs but only from the moment on when there is actual progress.

Accrue prorated

Base costs with **Accrue prorated** appear pro rata to the actual progress in the Actual Base Costs.

Accrue at end

Base costs with **Accrue at end** appear in total in the Actual Base Costs but only from the moment there is a 100% completion.
Balance

Under the **Finance → Balance** tab you will find an overview of cost values listed by Expected, Planned, and Actual.

Select the project in row #0 and go to **Finance → Balance** in the Inspector. You will see the total Planned, Expected and Actual Costs of your project.
Work costs

**Work costs** are costs generated by work from resources allocated to the activity.

A resource can have following cost information:

- Standard Rate
- Overtime Rate
- Base Costs

Enter cost information for your resources in a Resources or Assignments view in the Cost inspector.

Attachment cost

**Attachment cost** are costs due to base costs on attachments.

Enter the basic costs of your attachments in an Attachments view in the Cost inspector.
Cost views

In Merlin Project you’ll find following pre-configured cost views:

- Work Breakdown > Budgeting
- Work Breakdown > Cost Expectation
- Work Breakdown > Cost Planning
- Work Breakdown > Plan/Actual Comparison (Cost)
- Assignments > Cost Expectation
- Assignments > Cost Planning
- Assignments > Plan/Actual Comparison (Cost)
- Resources > Cost

They contain column sets that give you an overview of the costs for individual groups, activities, milestones, assignments or resources.

Go to one of the many cost views for quick access to budget information in the project.
