Note for Merlin Project Express users

The following functions are only available in Merlin Project.

The Library in Merlin Project is a handy way of working with frequently-used content. You can find and manage your documents, activities, and contacts in the Library.

The easiest way of moving content into or out of the Library is by dragging & dropping it.
If you drag & drop a phase or group from a project into the Library, this content will be available for other and new projects. This makes life easier for you as repeat content does not have to be created from scratch each time.

For a better overview, arrange your content in folders. This gives structure to the Library and allows you to work quickly with the content.

Library contents

The Library contains the following information, enabling you to use and manage the following content:

- Attachments
- Documents
- Contacts
- Outlook contacts
- Activities

The Documents section lets you manage all project-related and frequently-used documents of any type. This helps you enormously in keeping your workload down in the case of frequently-occurring content.
