Merlin Project

Hello!

Merlin Project is in public beta test now. The fifth generation of our project management software comes with a few very interesting innovations that will inspire you.

With the **Kanban board**, Merlin Project fills the gap to agile project management and supports Kanban in a particularly clever form. This combines the traditional management of large projects with the ease of an agile approach. Now hybrid project management is finally a reality on the Mac.

The **resource pool** allows you the optimal utilization of your resources for all projects. Organize the entire team in one or also more central pool files and note down working hours, holidays, absences and much more there.

The **groupings** provide users with a deep insight into the project structure. Analyze your project: Which activities are the biggest time-consuming? And which of them are on the critical path?

The well-known **style editor** has been greatly simplified in Merlin Project. Format single activities individually. But also rule-based styles are still possible. With the new style editor, all this is easier than ever.

But not only under the hood was much changed, also the **appearance** of Merlin Project has been given a facelift. All surfaces shine in a modern, fresh design.

More details about Merlin Project and the free download of the beta version can be found on our website.

Your Privacy Matters

To ensure that you are informed about how ProjectWizards uses your personal data, we've updated our privacy policy. Here is some information you can expect to see in the update:

- Why and how we process your data
- Legal grounds for processing personal data
- When we might share your data
- Data privacy user rights and how to exercise them
- How to contact ProjectWizards about data privacy
