

Merlin Project

## This is Merlin Project 9

with intelligent AI-assistant and dynamic baseline

Dear fellow project manager,

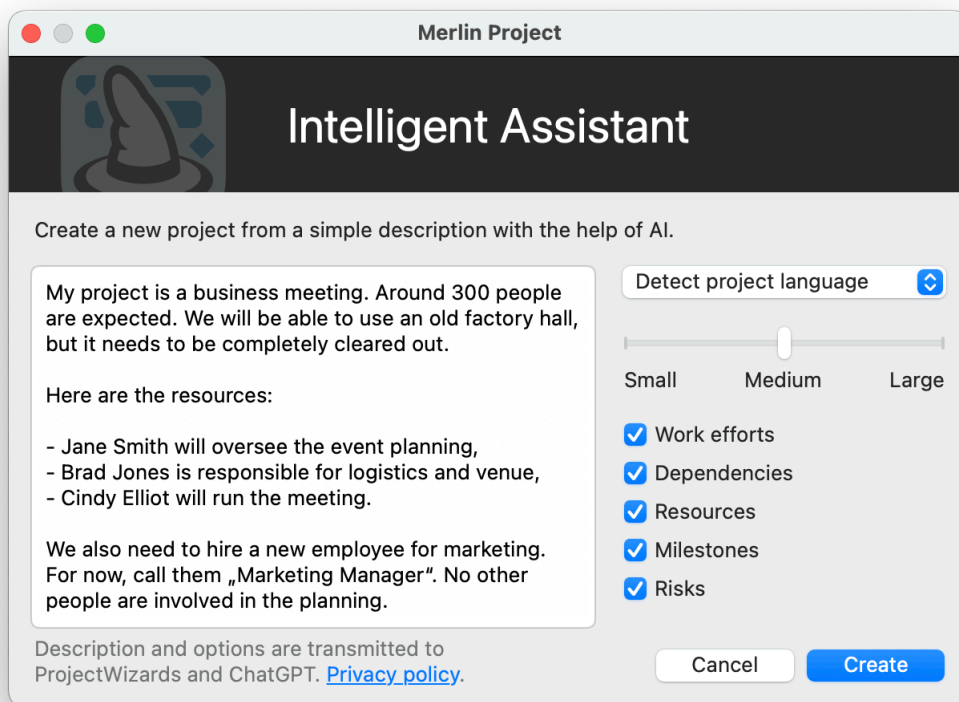

For over 20 years, we've focused on one mission: helping you manage complex projects with the best planning software. Along the way, we listened, learned, and adapted to every new challenge. Today, [Merlin Project](#) stands as a tool we're genuinely proud of.

Just in time for our 20th anniversary in Early November, we are releasing Merlin Project Version 9 for macOS and iPadOS.

New in Version 9: The **intelligent assistant** that creates full project plans with the power of AI, and the **dynamic baseline** to compare today's project with an older version.

Merlin Project Version is out now. Simply update your application or download it on our [Website](#) or the [App Store](#).

**Create Your Project In Seconds** ⚡

Say goodbye to tedious manual entry and hello to a fully developed project plan in seconds! With a simple text prompt, the **intelligent assistant** will create a full project plan for you, including:

- **Full Project Setup:** Activities, milestones and dependencies. Everything is clearly structured in a Gantt chart.
- **Resource Allocation:** Each process can be assigned to a self-defined resource.
- **Risk Analysis:** Potential risks are attached directly to the relevant activities when the project is created.

Ready to get started? Get to know the new assistant with this [video](#).

## Revisit Earlier Project Versions 🗕🗕

Another game-changing feature in *Merlin Project 9* is our **dynamic baseline**. Merlin Project automatically saves all changes locally, from the very start of your project until now.

Set a reference date to an earlier time stamp and track how your project has progressed from that point onwards. This allows you to revisit earlier versions, compare progress, and analyze adjustments – giving you powerful insights for post-project reflection and future planning.

Learn more about **dynamic baseline** in this [video](#).
